

Assignment 1

Assignment Date	9 September 2022
Student Name	R.Sornamala
Student Roll Number	962719106034
Maximum Marks	2Marks

1.Split this string

Solution:

```
s="Hi there Sam!"
```

```
x=s.split()
```

```
print(x)
```

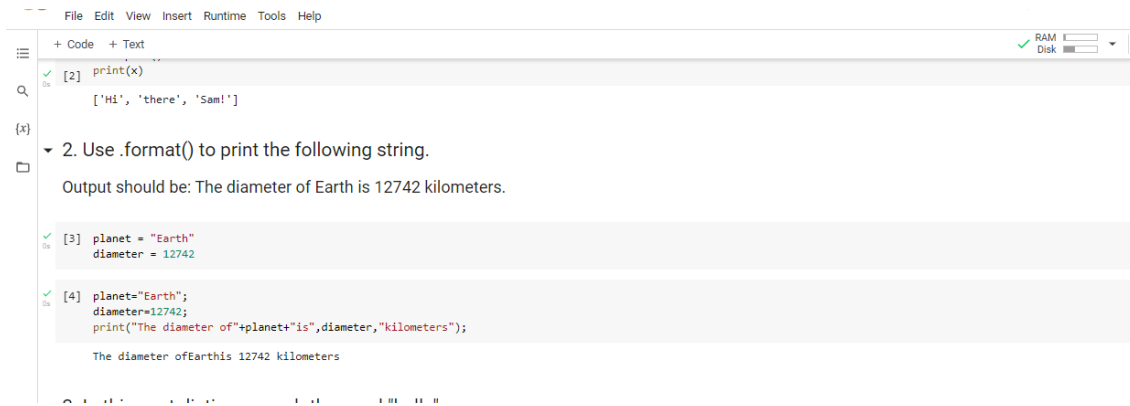

2.Use.format() to print the following string

Solution:

```
planet="Earth";
```

```
diameter=12742;
```

```
print("The diameter of"+planet+"is",diameter,"kilometers");
```

The screenshot shows a Jupyter Notebook with a menu bar (File, Edit, View, Insert, Runtime, Tools, Help) and a toolbar with icons for code and text. The notebook contains a task description and two code cells. The task asks to use `.format()` to print a string. The first code cell defines `planet` and `diameter`. The second code cell prints the formatted string.

```
File Edit View Insert Runtime Tools Help
+ Code + Text
[2] print(x)
['Hi', 'there', 'Sam!']
2. Use .format() to print the following string.
Output should be: The diameter of Earth is 12742 kilometers.
[3] planet = "Earth"
    diameter = 12742
[4] planet="Earth";
    diameter=12742;
    print("The diameter of"+planet+"is",diameter,"kilometers");
The diameter ofEarthis 12742 kilometers
```

3. In this nest dictionary grab the word "hello"

Solution:

```
d= {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
print(d['k1'][3]["tricky"][3]
['target'][3])
```

The screenshot shows a Jupyter Notebook with a menu bar (File, Edit, View, Insert, Runtime, Tools, Help) and a toolbar with icons for code and text. The notebook contains a task description and two code cells. The task asks to grab the word "hello" from a nested dictionary. The first code cell defines the dictionary `d`. The second code cell prints the value of `d['k1'][3]['tricky'][3]['target'][3]`.

```
Assignment_1_3_txt.ipynb
File Edit View Insert Runtime Tools Help
+ Code + Text
3. In this nest dictionary grab the word "hello"
[5] d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
[6] print(d['k1'][3]["tricky"][3]
        ['target'][3])
hello
```

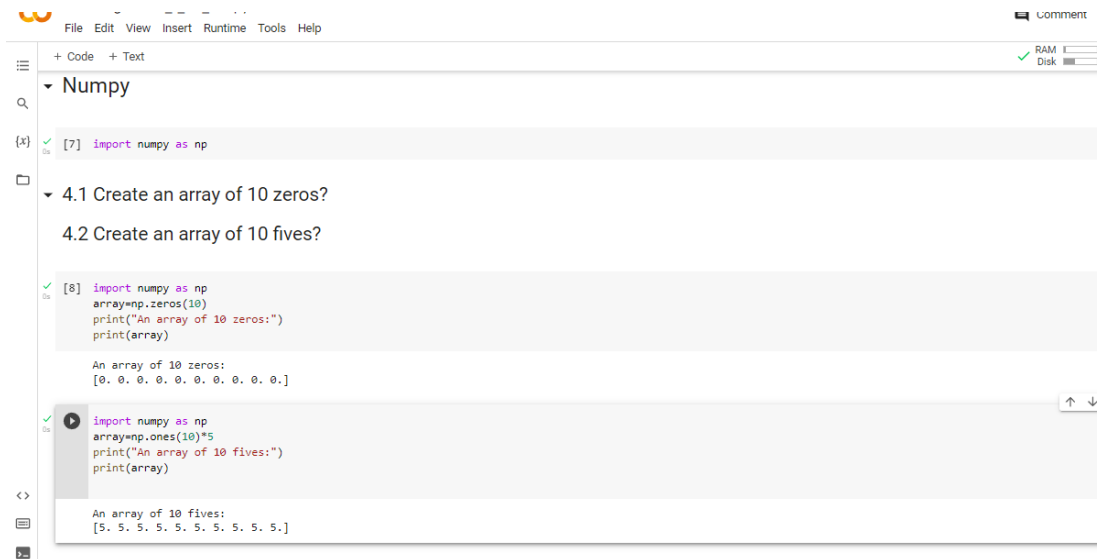

4. Create an array of 10 zeros?

Create an array of 10 fives?

Solution:

```
import numpy as np
array=np.zeros(10)
print("An array of 10 zeros:")
print(array)
import numpy as np
array=np.ones(10)*5
```

```
print("An array of 10 fives:")
print(array)
```

The screenshot shows a Jupyter Notebook interface. The top menu bar includes File, Edit, View, Insert, Runtime, Tools, and Help. Below the menu bar, there are tabs for '+ Code' and '+ Text'. On the right side, there are status indicators for RAM and Disk, both showing green checkmarks. The main area of the notebook displays a code cell with the following code:

```
[7] import numpy as np
```

Below the code cell, there is a section titled '4.1 Create an array of 10 zeros?' and '4.2 Create an array of 10 fives?'. The output of the code cell shows:

```
An array of 10 zeros:
[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

The next code cell contains:

```
[8] import numpy as np
array=np.zeros(10)
print("An array of 10 zeros:")
print(array)
```

The output of this code cell is:

```
An array of 10 zeros:
[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

The final code cell contains:

```
[9] import numpy as np
array=np.ones(10)*5
print("An array of 10 fives:")
print(array)
```

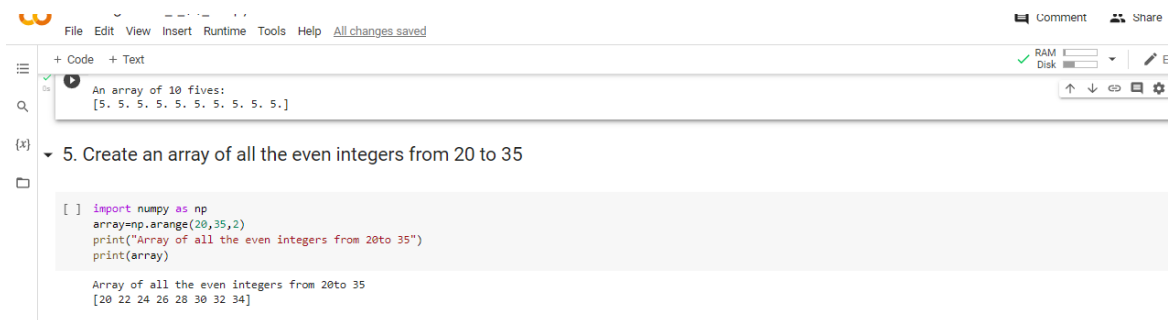

The output of this code cell is:

```
An array of 10 fives:
[5. 5. 5. 5. 5. 5. 5. 5. 5. 5.]
```

5.Create an array of all the even integers from 20 to 35

Solution:

```
import numpy as np
array=np.arange(20,35,2)
print("Array of all the even integers from 20to 35")
print(array)
```

The screenshot shows a Jupyter Notebook interface. The top menu bar includes File, Edit, View, Insert, Runtime, Tools, and Help. Below the menu bar, there are tabs for '+ Code' and '+ Text'. On the right side, there are status indicators for RAM and Disk, both showing green checkmarks. The main area of the notebook displays a code cell with the following code:

```
[ ] import numpy as np
array=np.arange(20,35,2)
print("Array of all the even integers from 20to 35")
print(array)
```

The output of the code cell shows:

```
Array of all the even integers from 20to 35
[20 22 24 26 28 30 32 34]
```

6.Create a 3*3 matrix with values ranging from 0 to 8

Solution:

```
import numpy as np
x=np.arange(0,9).reshape(3,3)
```

```
print(x)
```

The image shows a Jupyter Notebook interface. The top bar includes a menu (File, Edit, View, Insert, Runtime, Tools, Help) and a status bar (All changes saved). The left sidebar has icons for file explorer, search, and variables. The main area displays a code cell with the following code:

```
array=np.arange(20,35,2)
print("Array of all the even integers from 20to 35")
print(array)
```

Below the code cell, the output is shown:

```
Array of all the even integers from 20to 35
[20 22 24 26 28 30 32 34]
```

Below the output, a task description is shown:

6. Create a 3x3 matrix with values ranging from 0 to 8

The code cell for this task contains the following code:

```
import numpy as np
x=np.arange(0,9).reshape(3,3)
print(x)
```

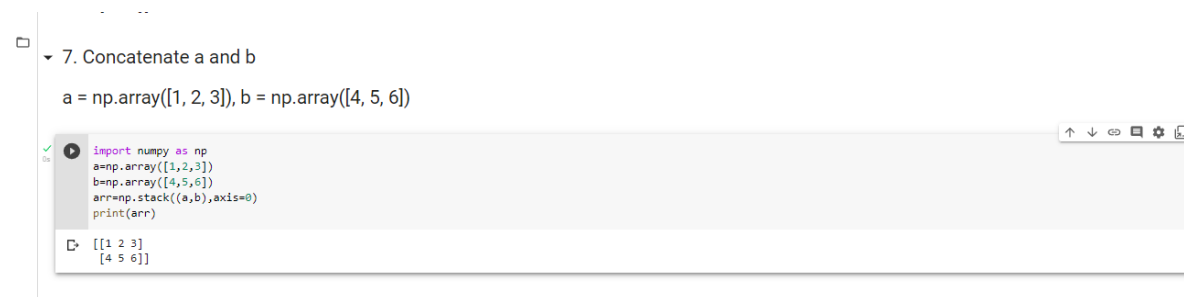

The output of this code is a 3x3 matrix:

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

7.Concatenate a and b

Solution:

```
import numpy as np
a=np.array([1,2,3])
b=np.array([4,5,6])
arr=np.stack((a,b),axis=0)
print(arr)
```

The image shows a Jupyter Notebook interface. The left sidebar has a folder icon. The main area displays a task description:

7. Concatenate a and b

Below the task description, the code cell contains the following code:

```
a = np.array([1, 2, 3]), b = np.array([4, 5, 6])
```

Below the code cell, the output is shown:

```
[[1 2 3]
 [4 5 6]]
```

8.create a dataframe with 3rows and 2columnns

Solution:

```
import pandas as pd
```

```
data=[['tom',10], ['nick',15], ['juli',14]]
```

```
df=pd.DataFrame(data,columns=['Name','Age'])
df
```

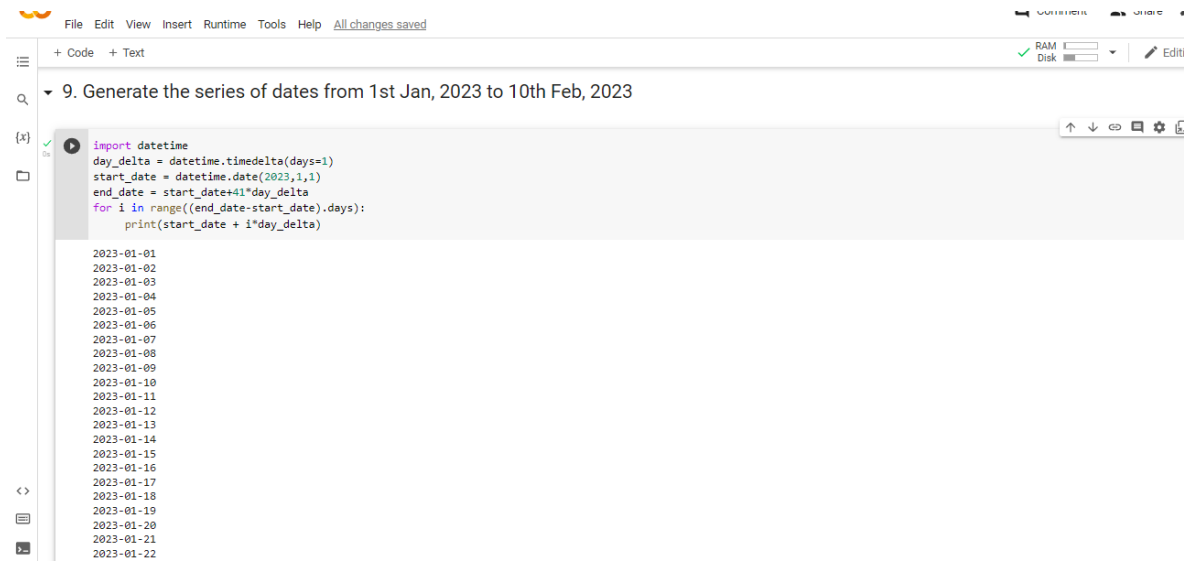

The screenshot shows a Jupyter Notebook interface. The top menu bar includes File, Edit, View, Insert, Runtime, Tools, Help, and Saving... Below the menu is a toolbar with '+ Code' and '+ Text' buttons. The main code area contains two cells. The first cell has the code `[[1 2 3], [4 5 6]]`. The second cell has the code `import pandas as pd` followed by `data=[['tom',10],['nick',15],['juli',14]]` and `df=pd.DataFrame(data,columns=['Name','Age'])`. Below the code, a preview of the DataFrame is shown as a table with columns 'Name' and 'Age'.

	Name	Age
0	tom	10
1	nick	15
2	juli	14

9.Generate the series of dates from 1st Jan,2023 to 10th Feb,2023

Solution:

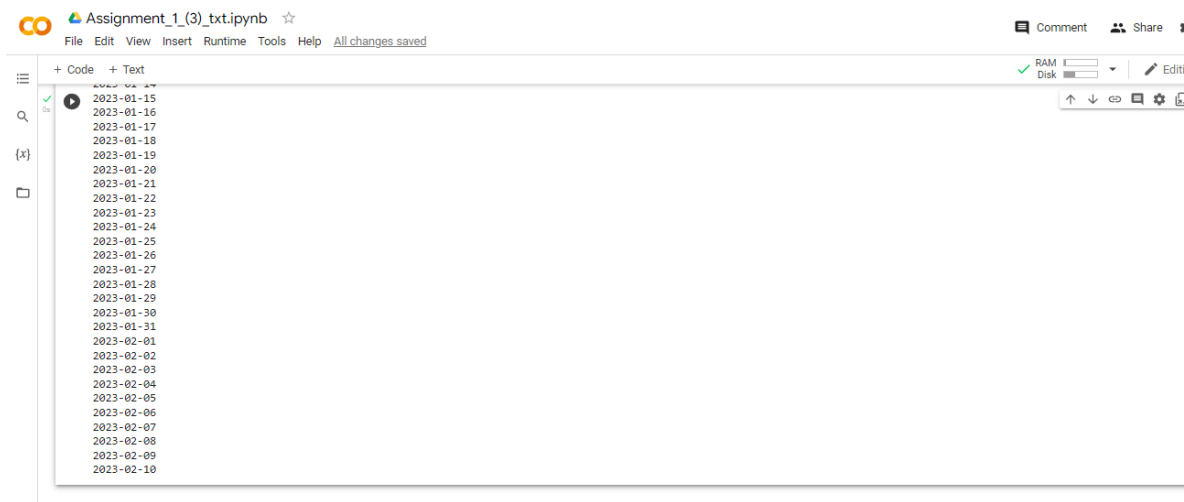

```
import datetime
day_delta = datetime.timedelta(days=1)
start_date = datetime.date(2023,1,1)
end_date = start_date+41*day_delta
for i in range((end_date-start_date).days):
    print(start_date + i*day_delta)
```

The screenshot shows a Jupyter Notebook interface. The top bar includes a menu (File, Edit, View, Insert, Runtime, Tools, Help) and a status bar indicating "All changes saved". The notebook is titled "9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023". The code cell contains the following Python code:

```
import datetime
day_delta = datetime.timedelta(days=1)
start_date = datetime.date(2023,1,1)
end_date = start_date+41*day_delta
for i in range((end_date-start_date).days):
    print(start_date + i*day_delta)
```

The output of the code is a list of dates from 2023-01-01 to 2023-01-22, printed one per line.

The screenshot shows a Jupyter Notebook interface. The top bar includes a menu (File, Edit, View, Insert, Runtime, Tools, Help) and a status bar indicating "All changes saved". The notebook is titled "Assignment_1(3)_txt.ipynb". The code cell contains the following Python code:

```
import datetime
day_delta = datetime.timedelta(days=1)
start_date = datetime.date(2023,1,1)
end_date = start_date+41*day_delta
for i in range((end_date-start_date).days):
    print(start_date + i*day_delta)
```

The output of the code is a list of dates from 2023-01-15 to 2023-02-10, printed one per line.

10.Create 2D list to DataFrame

Solution:

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
df=pd.DataFrame(lists,columns=['Number',"Letter",'Number'])
print(df)
```
